The selection committee met on February 27, 2023, toured the project sites, discussed and scored projects, discussed LPA Manual and timelines and developed a recommendation for TAC consideration. The committee discussed the level of carbon reduction being achieved by the projects; the desire to spread funding across multiple communities; and the need and ability of projects to meet the required timeline for obligating funds. The following changes to requests were made by project sponsors based on the discussion:

- The Siloam Springs project was withdrawn due to concern of not being able to meet the required timeline for obligating funds in this application cycle with the intent to re-apply for FY2024 funding.
- The Centerton project requested reducing the scope of work to engineering only to meet the required timeline for obligating funds in this application cycle. This request reduced the application from \$125,000 to \$25,000. The group discussed the requirement of the minimum application threshold of \$125,000.
